The *Reversal* Process

A woman who regrets her decision after taking the first pill can save her pregnancy, but time is of the essence!

Progesterone is administered to reverse the effects of the abortion pill.

An ultrasound confirms viability of the baby.

Progesterone treatments continue for a minimum of two weeks.

Ongoing support continues through a referred local pregnancy center.

Global Reach

WOMEN IN ALL

50 states

AND 98 COUNTRIES

have been assisted by the Abortion Pill Rescue® Network.

92.5%

**OF KNOWN
ABORTION PILL REVERSALS**

occur in the United States.

Why People Call the *Hotline*

- 1** Scared, but just took the pill and **she wants to save her pregnancy.**
- 2** Another person coerced her take the abortion pill.
- 3** Abortion facility said it's too late, she has to take the second pill.
