

Informed Consent Following a Prenatal Diagnosis

Brand: Heartbeat Academy
Product Code: 709

Price: \$14.95

Short Description

Parents are increasingly offered prenatal tests to screen for various prenatal conditions and subsequently offered abortion following a positive result. Ethicists broadly agree Informed Consent is critical in making medical decisions, yet parents often are not presented with the information they need to make an informed decision following a positive test result, which all too often leads to abortion. Presented by Gary Thome
